

Warning:

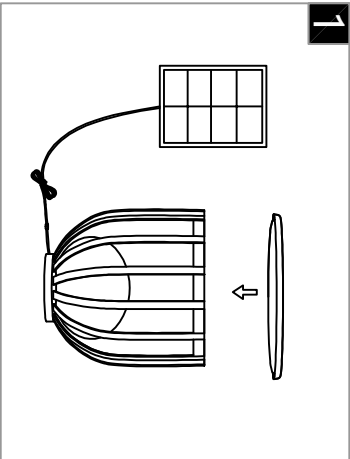

This product must be installed by personnel who are familiar with its structure and related hazards, in accordance with the installation specifications. This product is suitable for indoor installation.

Product style diagram

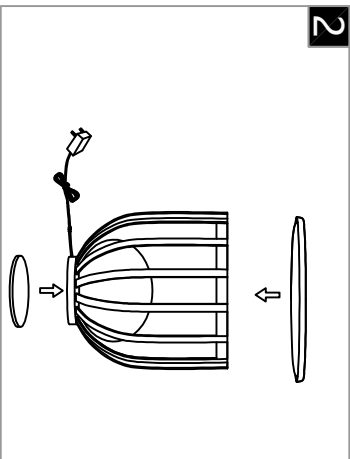

Steps of installation

1

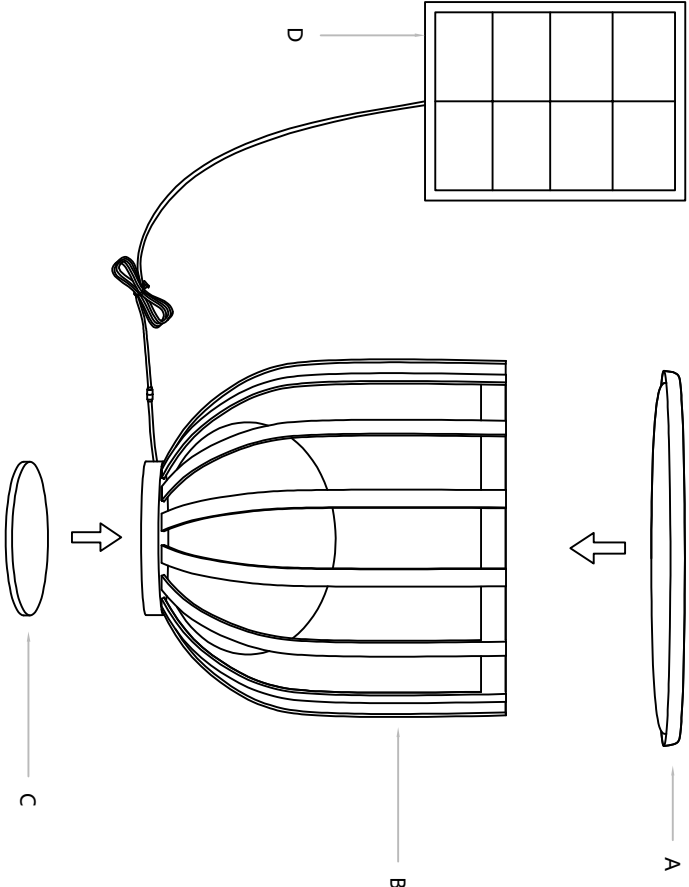

Fix the photovoltaic panels at the high position where they can receive sunlight according to their length. Finally, place the lamp cover horizontally on the top of the lamp stand, and then connect the plug.

2

Insert the charger into the socket to start charging. Then, attach the anti-slip pad to the base. Next, place the lamp cover horizontally on the top of the lamp stand. Finally, connect the plug and you're ready.

Note: Do not charge the charger and the solar panel simultaneously.

- 1.If the lamp (B) is installed in an outdoor open area, first install the base plate to fix the lamp frame.
2. If the lamp (B) is installed indoors or is not fixed for the time being, you can directly tear off the anti-slip pad (C) and stick it on the base plate. Choose an appropriate position to place the lamp (B), and make sure it is placed stably without shaking.
3. Fix the photovoltaic panel (D) at a high position where it can receive sunlight according to the length of the wire.
4. Finally, place the lamp cover (A) horizontally on the top of the lamp frame, and then connect the plug.
